Jefferson’s magnet programs are building the leaders of tomorrow today, through a career focused, Liberal Arts curriculum. Students learn leadership skills, while immersing themselves into the curriculum. They will have the opportunity to recognize others while bringing out the best in themselves. They will analyze different leadership styles to develop their own method of leadership and have the ability to showcase their skills throughout their four years at Jefferson.

The Maritime and Marine Science Honors Academy equips students with college ready, professional skills needed to excel in life. Students benefit from honors level curricula, paid internships for on-the-job training, industry certifications, theme focused field trips and guest speakers, participation in professional clubs, and community service opportunities. Students will learn to excel in the classroom, in their community and school wide.

The leadership skills, rigorous curriculum and opportunities for collaboration, will allow each student to excel in their chosen college/career path and reach their goals.

“My can’t change the direction of the wind, but I can adjust my sails to always reach my destination.”

Jimmy Dean
